## PRIMARY SCHOOL TCM INTERCOM SYSTEM

- **Instant, private communication between office and any individual class room!**
- Easy and cheap to expand and make changes—even Portables!
- Fully Installed by our professionally licensed trades staff with 12 month warranty.
- No dial on the handset. Just lift receiver and connects directly with office.
- No numbering scheme. Simply follows your room and class numbers!
- Room plan and cabling details included with every installation.
- **Easily handles multiple rooms trying to contact the office at the same time.**  
(As normally happens during a lock down. *Note that normal phone systems WILL NOT do this!*)
- SUPER EASY TO USE!

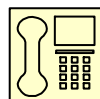

AVAILABLE AS AN OPTIONAL EXTRA WITH ANY OF OUR PRIMARY SCHOOL WIDE PA SYSTEMS

Option Prices

Powerful PA Amplifier

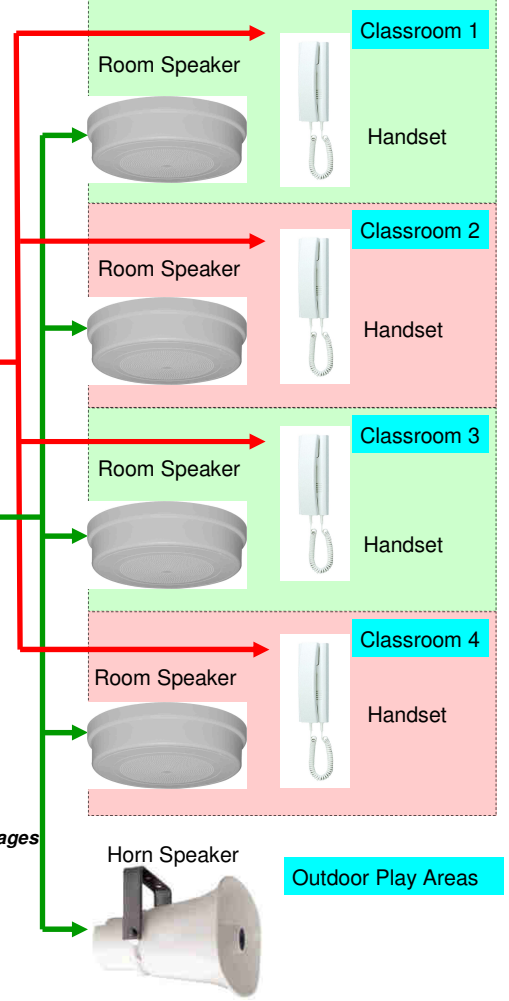

Paging Mic

Equipment located in Main Office

- Period Bell signals
- Emergency Evacuation
- Lock down tones
- Wet Weather calls
- Line up Music
- Voice Paging

"Whole of School" messages

## Frequently Asked Questions

Will the installation interrupt our existing data or telephone cabling?

No. The system forms a *totally separate cabling system*. In some cases unused data ports in rooms may be redeployed for use in the communications system.

Will (for example) a failure in the PA system affect the intercom system?

No. Although they share common cabling, **the two systems operate totally independently**. Likewise a failure of the intercom system means the PA system will still work fine and can be used for messaging until the other system is repaired.

Can a room call another room directly?

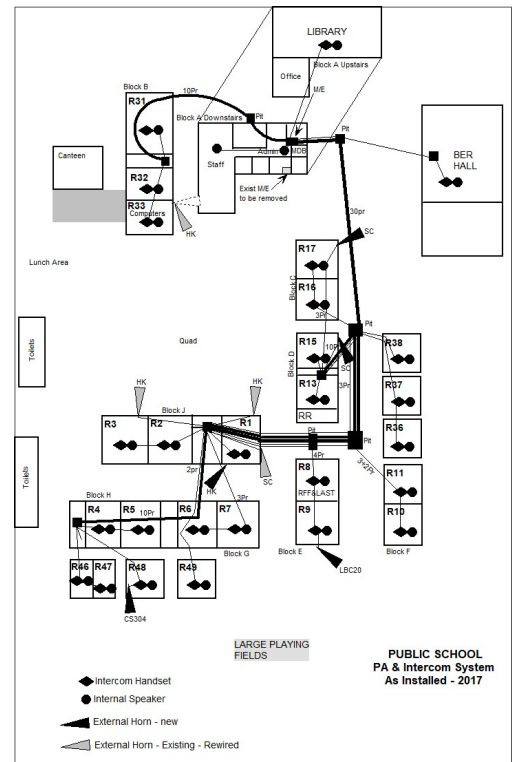

No. The intercom system is designed specifically for communications between rooms and the main office. The room phones do not have dials on them. It is possible however to manually transfer calls.

Can multiple rooms call the office at the same time?

One of the main advantages of the TCM Intercom system is how it handles multiple incoming calls. If more than one room calls the office at the same time, the lights for each room will light up and the callers will automatically "camp on" the system. You can then answer each call in turn by pushing each room button one at a time. This is an ideal solution for managing lock down at a school where each room needs to report marked roll back to the office.

Can I get the intercom installed separately?

No. We only install the TCM intercom alongside our new PA systems using common cabling. There is little cost advantage installing the system separately. If you already have a PA system and only want the Intercom we can quote this separately if required as long as the existing PA system and cabling are in good condition and services all rooms.

Each intercom installation includes a full set of cabling plans of your school for future reference. Makes service and alterations easy!
